👤 ABOUT ME

Let me prove to you what I can do! Check out my portfolio here. I work relentlessly every day to become a master developer, and I hope my projects and portfolio can prove it! I believe religiously in hard work and effort, that is who I am.

⚙️ EXPERIENCE

Weather App Using React

Link to Application

- Uses JavaScript as programming language and React.js as framework
- Users search for a city and weather data relating to that city is shown
- Stunning UI created with Tailwind CSS
- Web APIs integrated seamlessly into application

A Game of Chance

Link to Application

- Created using JavaScript
- UI created with CSS3
- Pins two players against each other (can play by yourself)
- Uses functional programming to implement features

Movies and Music Database (m&mDB)

Link to Application

- Created using JavaScript and jQuery, UI created with Materialize CSS
- data is fetched from a movie API and a music API, it is then rendered dynamically to the user
- Users can search for movies/music by name, genre, release date, and save movies/music to their favourites

Random Password Generator

Link to Application

- Uses JavaScript
- Manipulates DOM and generates a random password based on user input
- Functional programming used to implement features

Hourly Planner for Employees

Link to Application

- JavaScript used as programming language
- Bootstrap used to create UI
- DOM manipulation, functional programming, local storage and built-in JavaScript date library is used
